EXPERIMENT-15

Analyse Various Types of Services Using Webalizer Tool.

Aim: To analyse web server usage & performance

Algorithm:

Install Webalizer
obtain Apache
Configure the log file
Generate and open HTML
Analyse visitors
Stop program

sudo apt update
sudo apt install webalizer
sudo webalizer /var/log/apache2/access.log

RESULT: Thus webalizer analyzes web server logs and generates reports about visitors requests bandwidth, usage, URL and HTTP Responses codes

Scanned with OKEN Scanner

OUTPUT

Total Visit : 1250

page Viewed : 3420

File Accessed : 5210

Total Hits : 7245

Data Transferred : 45820 KB

HTTP 200 OK : 21500

HTTP 404 Not found : 1200
